What does the Excretory System do?

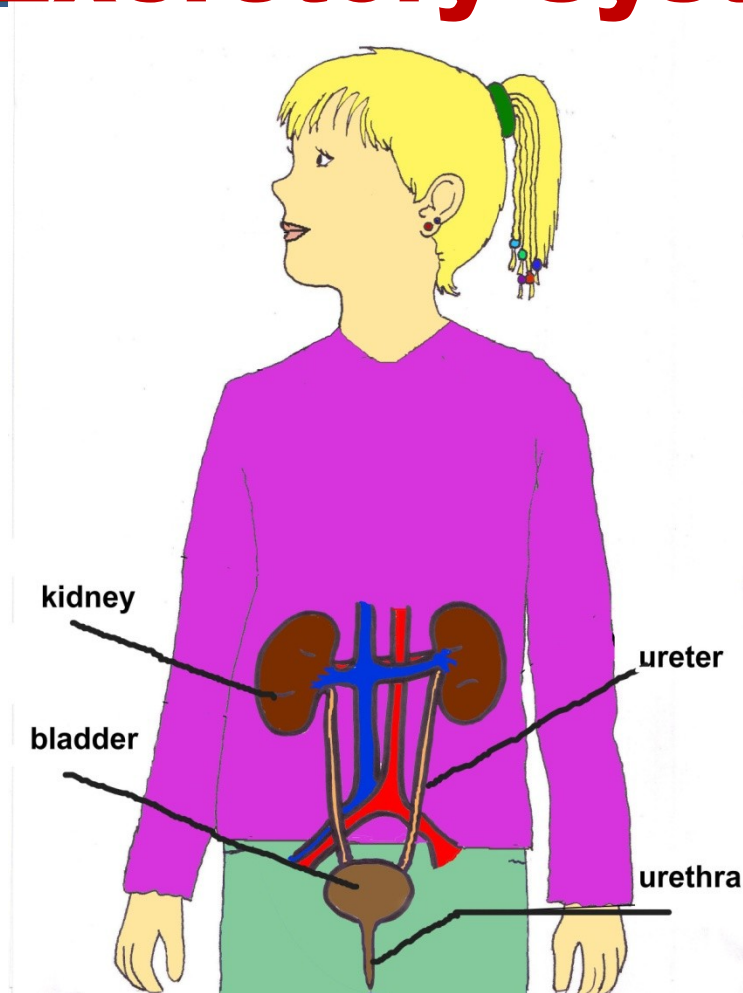

The excretory system removes all the waste from our body.

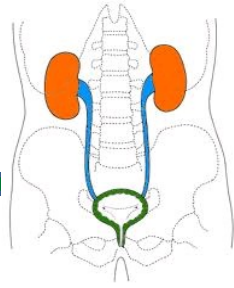

It is also called the **Urinary System**.

Parts Of the Excretory System

- Kidneys
- Ureters
- Bladder
- Urethra

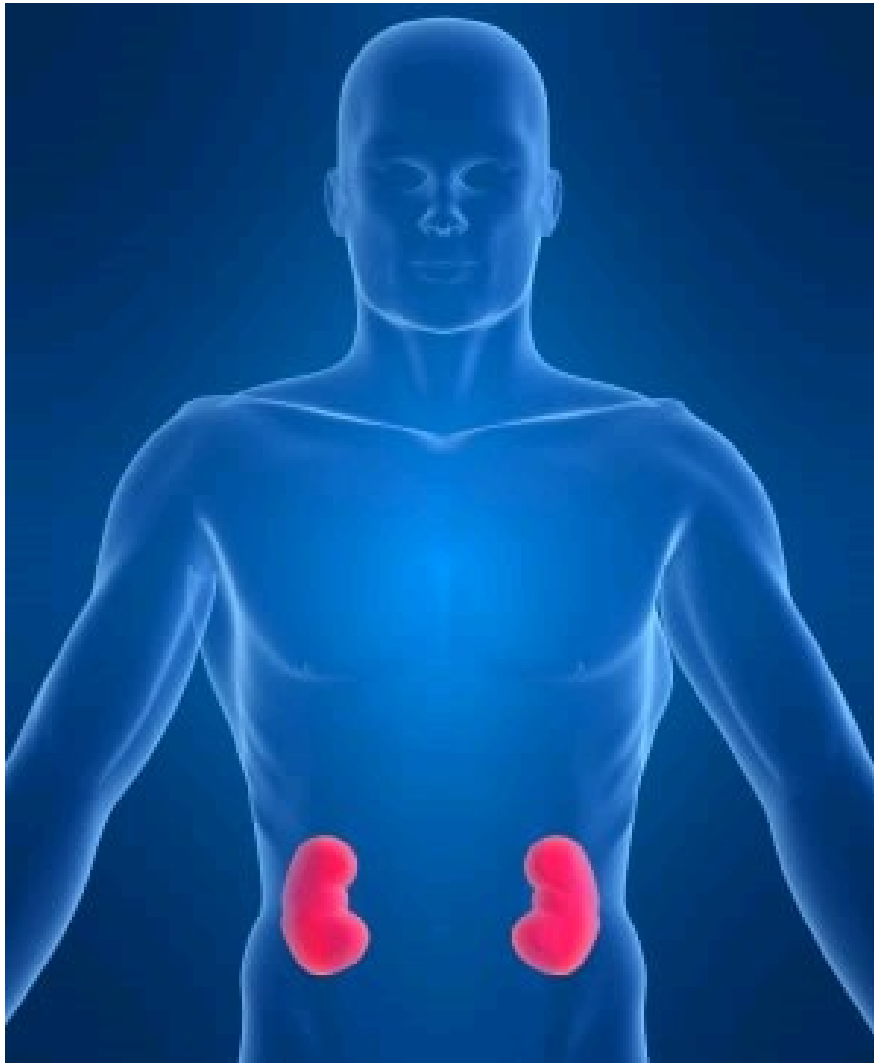

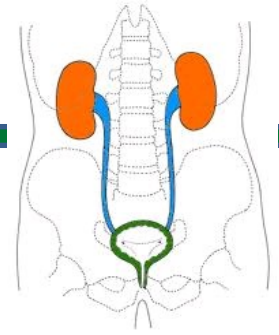

Lets take a journey of the Excretory System

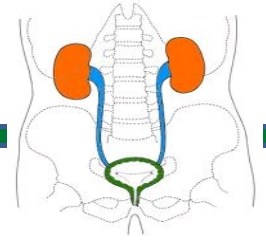

Kidneys

- Two bean-shaped organs that **filter waste** from the blood and **produce urine.**
- You need only 1 kidney to live.

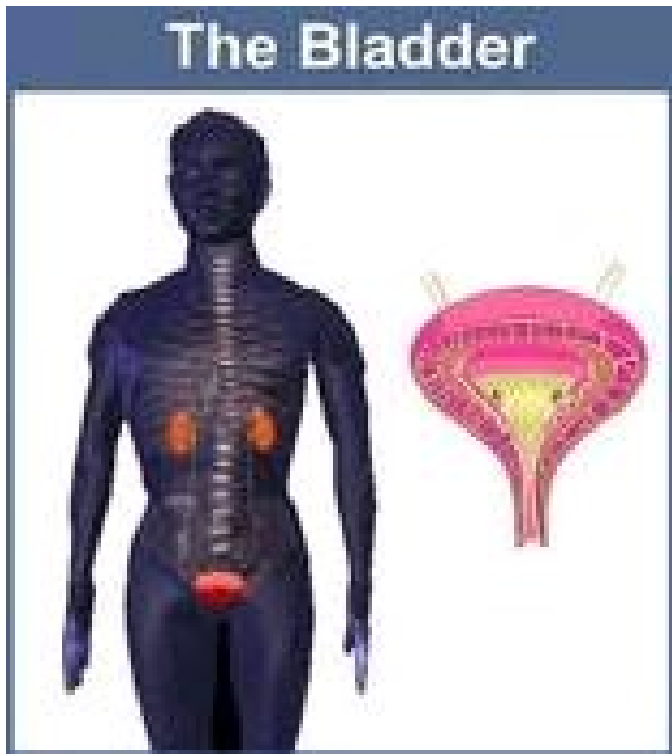

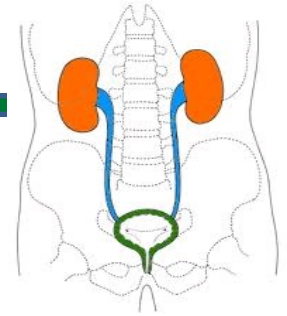

Ureters

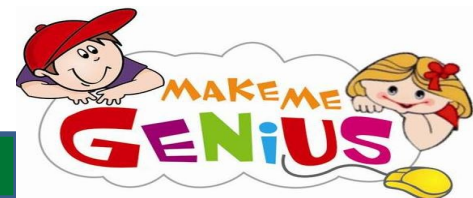

- Two thin **tubes** that take pee from the kidney to the bladder

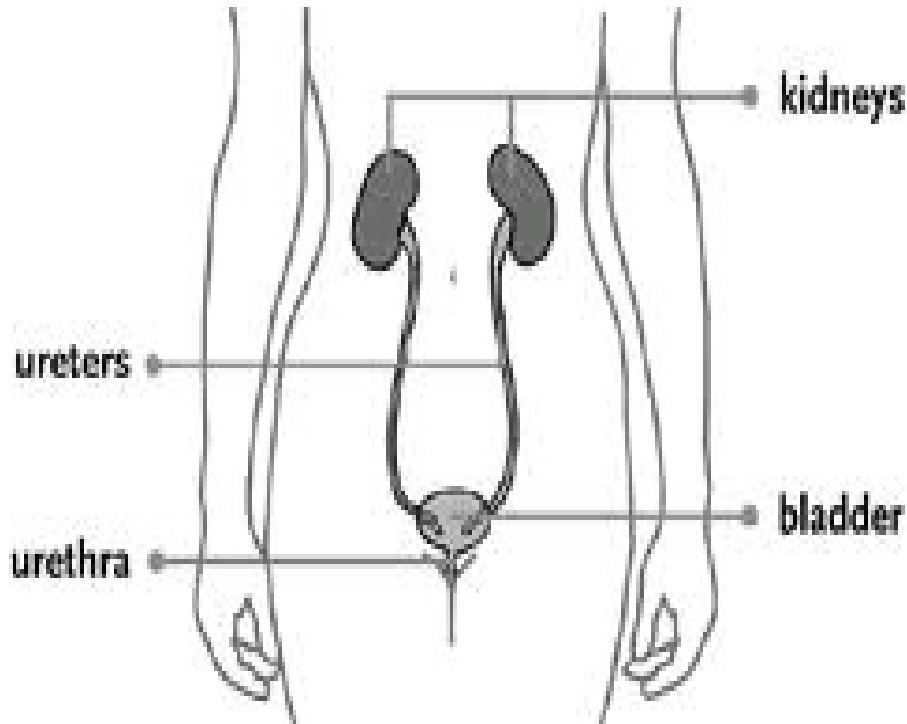

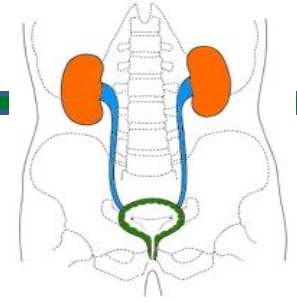

Bladder

- A sac that **holds pee** until it's time to go to the bathroom.

Urethra

- The tube that carries urine from the bladder out of the body when you pee.

Thanks
