What does the Respiratory System do?

- The respiratory system helps us to **breathe in oxygen** and **take out carbon d**

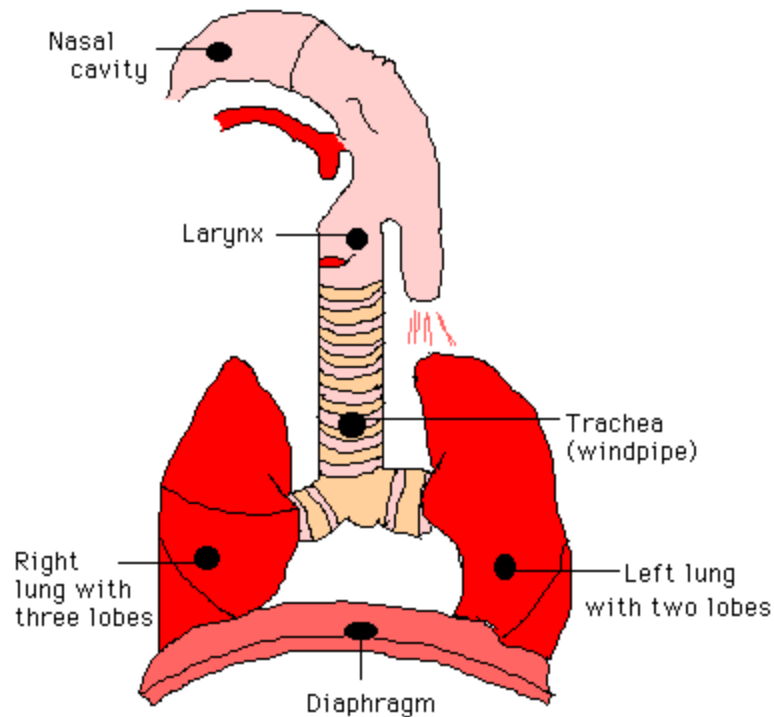

Parts Of The Respiratory System

- Nose
- Mouth
- Trachea
- Bronchi
- Bronchioles
- Lungs
- Alveoli

Lets ~~Take a Journey~~ Of The Respiratory System

Mouth Or Nose

Nose & Mouth

They breathe in air
and take out air.

Trachea (wind pipe)

- It is a tube that connects the **larynx** to the **lungs**, allowing the passage of **air**.

Lungs

- The lungs and respiratory system allow **oxygen** in the air to be taken into the body, while also enabling the body to get rid of **carbon dioxide** in the air breathed out.

Bronchioles

- The small airways of the lung extending from the **bronchi** to the **bronchioles**.

Good Bye

Thanks
